Fax Coversheet - Urgent

This is a request for an estimate on a project.

=====

Attention Client:

Please verify and check that the following has been included in this fax:

Worksheet: _____

Drawing/BluePrint: _____

Contact Information: _____

Thank you for the opportunity to earn your business!

Instructions for getting an estimate

- 1) Please print this document and fill out the necessary information. A fax coversheet has been included with this document.**
- 2) It is crucial that the blue print or drawing that is faxed to us have accurate measurements. The closer the measurements are to the actual drawing the closer the estimate will be too accurate. Please also make sure that the scale used is indicated on the drawing or blue print. Once an estimate has been agreed to and a deposit is taken we will come out and template your project for fabrication. We will take plywood and make a replica of the project. If there is a variation in the wall that will be taken into account when the material is cut. Unlike some installers we will not be cutting into the dry wall to make the project fit. If there are notches that need to be made that will be documented when the templating is done so that your project is a custom fit. There is no additional charge for the custom fit. Please also keep in mind that to template the cabinets they must be installed and leveled. It is also important to have either the measurements or model numbers for the sink and facets sent to Dixie directly or at the job site before templating to ensure accuracy and efficiency.**
- 3) If the drawing or blue print does not show the cabinet layout please indicate the areas that will need the edge detail. Those would be areas that are not against the wall, cabinets or against an appliance. This will also affect your estimate as edge detailing is based on linear ft.**
- 4) If there is an overhang such as a bar or island, please indicate what support if any there is and how far the over hang is. This may make a difference in the joints, seams, sq ft, material and work needed to make sure the material has sufficient support.**
- 5) It is recommended that either the homeowner or the contract/builder/designer be present at the time of templating so that any seams, joints or obstructions may be discussed at that time. Please keep in mind if a change such as back splash, sinks, edge detail or sq footage needed changes there will be a revision in the estimate. It is important to communicate that with the templator or preferably before the template date.**
- 6) All of these steps are being taken to be as accurate and efficient as possible. Thank you for taking the time to help us.**

Dixie Cut Stone and Marble Work Sheet for Estimate

1) Have you selected a sink?

Yes _____ No _____ Already Existing _____

Drop- in or Under-mount

Manufacture _____
